The Spa Signature Massage

Our licensed massage therapists will draw upon their knowledge of various massage techniques to customize a massage that addresses your individual needs.

Deep Tissue Massage

This intense technique eases pain and loosens tight muscles using deep strokes and firm pressure.

Hot Stone Massage

Hot, volcanic stones stimulate the circulation system and increase your metabolism by releasing tension and opening energy channels.

Prenatal Massage

This natural touch therapy relieves tension and alleviates pregnancy-related discomforts while creating positive energy for you and your baby.

Medical Recovery Massage

Massage therapy designed specifically for individuals recovering from surgery, a medical condition or suffering from chronic pain.

Oncology Massage

A client-specific, customized massage session designed to meet the unique and changing needs of someone in treatment for cancer or with a history of cancer treatment. A safe massage plan generally revolves around the short- and long-term side effects of chemotherapy, radiation and surgery.

Reflexology

Reflexology concentrates on applying pressure to certain points on the hands and feet that correspond with organs and tissues in the body.

Myofascial Release Massage

Restore symmetry and balance through a gentle, sustained pressure technique that increases range of motion and reduces pain.

Craniosacral Therapy

A gentle technique that focuses on the central nervous system and treats mental stress, nerve and back pain, migraines, TMJ syndrome, fibromyalgia and other chronic pain conditions.
