

Our Facilities

Mercy Health St. Rita's Medical Center and the Lima community have invested in Graduate Medical Education by purchasing state-of-the-art simulation equipment and housing it in a new GME Center. Full-time simulation center director, David Faulkner, ACSM, RCEP, provides an amazing resource for hands-on, procedure-based education.

Ample study space is available to residents in the GME Center including the library pictured above and individual study rooms.

Our 242 seat auditorium is used for residency, hospital, and regional conferences and symposiums.

Simulation is an essential part of Emergency Medicine education. You will have monthly directed simulation sessions at our simulation lab with our faculty.
